

Remote Control Amphibious Excavator

**Making the
impossible possible
with no risk of life.**

Great Excavations Inc. presents Remote Control Capability

At Great Excavations, we make the impossible, possible. This year, we are building on our reputation for providing state-of-the-art amphibious excavators and trucks by adding remote control capability to our roster of specialty services.

From handheld devices to mobile command stations, our equipment breaks down barriers. Using a handheld remote, we can reach up to 1,200 feet with zero latency. At the next level, our virtual operators environment allows us to work real-time through live video. These exciting options create a safer, more dynamic workplace through limiting risk from both the environment and site-specific hazards.
